## **A Website for an institution**

**Introduction:** It is a website project made for Software Development Course. It is a website that facilitates managing the functioning of an institution. This **website** will help in making the whole functioning paperless.

**Objective:** The main objective of the website to manage all the details of student, teacher, administrative information for an institution. It is a user **friendly website** for an institution which reduces the **burden** and helps to manage all the information required for that institution.

### **Methodology:**

There will be a Home Page and a Contact page.

It tracks all the information of the students, administrative persons, and teachers of an institution.

It gives a **log in** and **sign up** option.

It allows log in option for both users and admin accessing the right username and password stored in the database.

It will provide a private page for every user containing their information loaded from the database.

It will have Data Listing page and an Admin Panel.

### **Technology:**

HTML, CSS, PHP

Notepad++

XAMPP (As a Database)

**Conclusion:** This website will help an institution to have their information in a place from where they can easily manage their work and manage a good contact with every person. They can give news and announcement through this website also.
